Mr Sammy Azdoufal

Per email – yamasammy@gmail.com / s.azdoufal@clinitex.fr.

**DEMAND // FACTUALLY INACCURATE AND HARMFUL STATEMENTS IN YOUR PUBLIC REPORT
REGARDING CANNABIS CLUB SYSTEMS**

Dear Mr Azdoufal

1. We address you on the instructions of our client, Cannabis Club Systems ("our Client").
2. This letter concerns your report published on GitHub, and your subsequent statements to media outlets including The Verge, regarding alleged security vulnerabilities you identified in software developed by our Client ("the Report").

3. Our Client acknowledges the work of independent security researchers in identifying and reporting vulnerabilities. However, your public report contains material factual inaccuracies and mischaracterisations which go beyond the scope of responsible technical disclosure. These statements have been amplified by the media and are causing significant and unwarranted reputational harm to our Client and, importantly, to third-party businesses who are not responsible for the vulnerabilities.
4. While our Client continues its investigation and remediation efforts, we must insist on the immediate correction of specific, demonstrably false and misleading claims in your report.

A. Material Factual Inaccuracy: "Medicinal" Classification and "Medical Records"

5. Your report claims that approximately 94% of members on our Client's platform were classified as "Medicinal". You have used this statistic to draw serious conclusions, such as your statement in your report: "This is not a generic PII database. It is a detailed medical and consumption profile attached to a real, verified, photographed human identity..."
6. The 94% figure is factually incorrect. Our Client's investigation has confirmed that an issue in the API response logic caused the "Medicinal" value to be returned incorrectly in certain circumstances. The actual figure for members classified as "Medicinal" within the database is approximately 12%.
7. Your subsequent characterisation of the data as "medical records" is a harmful exaggeration predicated on this false data point. The system does not store diagnoses, treatment records, prescriptions, clinical histories, or any information that would constitute a "medical record" in its ordinary and legal meaning.
8. Furthermore, client profiles do not constitute "medical profiles". Your statement in this regard is misleading and harmful to our Client.

B. Mischaracterisation of Consumption Data

9. Your report and associated media coverage interpret certain data fields as verified records of actual cannabis consumption or "consumption history".
10. This is a misrepresentation. The fields in question relate to administrative values used by clubs for management, compliance, or member preference settings, such as an 'estimated monthly consumption' value that may be populated at registration. They are not a log of actual, historical consumption events. Presenting them as such is misleading.

C. Unnecessary Harm to Third Parties: Publication of Club Names

11. The infographic included in your report and shared with the media explicitly names individual cannabis clubs and publishes their membership statistics.
12. The identification of these third-party businesses is not necessary to explain the technical vulnerabilities you discovered. The clubs did not create, control, or manage the affected software infrastructure and are not responsible for its security.
13. Your publication of their names exposes them to unwarranted reputational, commercial, and potential regulatory consequences. We are aware that other publications which initially included this information have since removed it upon request, recognising the unnecessary harm it causes.

D. Unsubstantiated Allegations: Underage Member Records

14. Your Report identifies member records with ages below 18 and concludes that this "suggests either fraudulent registrations or a verification failure." This is a serious and unsubstantiated allegation that materially misrepresents the nature of the data.
15. Our investigation confirms that your conclusion is unsupported for three key reasons:
 - 15.1. Grossly Inflated Numbers: Your analysis fails to account for data duplication across multi-location clubs, counting the same individual multiple times. This fundamental error creates a misleading impression of the scale of the issue;
 - 15.2. False "Verification Failure" Claim: Our Client's software includes mandatory age-validation controls that prevent the registration of underage members. The presence of these records is therefore not indicative of a failure in the system's controls;
 - 15.3. The records in question are artefacts of historical data imported from third-party systems when clubs migrated to our Client's platform. They represent pre-existing data-entry errors from systems not controlled by our Client.
16. Your conclusion is therefore entirely speculative and ignores the clear, evidence-based explanations for this legacy data. Presenting such a damaging and unsupported conclusion as fact constitutes a harmful misrepresentation.

DEMAND

17. Accordingly, we peremptorily demand that you, by no later than 17:00 on Tuesday, 30 June 2026, take the following corrective actions in your public GitHub report and on any other platforms under your control:
 - 17.1. correct the "94% Medicinal" figure to the accurate figure of approximately 12%, and post a clear and prominent note explaining the correction;
 - 17.2. remove all references to the data constituting "medical records," "detailed medical profiles," or similar terminology;
 - 17.3. amend the report to clarify that the consumption-related data fields are administrative, estimated, or preference-based values and not a verified history of actual consumption;
 - 17.4. immediately remove or anonymise the names of all individual clubs from the infographic and any accompanying text;
 - 17.5. remove the unsubstantiated conclusion that the presence of underage member records "suggests either fraudulent registrations or a verification failure";
 - 17.6. circulate a formal notice of correction, detailing the amendments stipulated above, to all media outlets, journalists, and publications to whom you previously provided your original, uncorrected report, and furnish us with written confirmation that this has been completed.

18. Should you fail to comply fully with these demands by the stipulated deadline, our instructions are to institute proceedings in the High Court of South Africa against you without further notice. Such proceedings will seek, inter alia, an urgent interdict to compel the removal and correction of the false and harmful information, and a claim for the substantial damages our client and its partners are suffering as a direct result of your inaccurate reporting.
19. All of our client's rights are strictly reserved.

Yours faithfully
